Filter

Vendor group	Description	Terms of payment	Time between invoice due date and pay...	Default tax group	Exclude from search e...	Accounting ...	Reporting currency etc...
Group	Foreign Vendor				☐		
Local	Local Vendor				☐		
Service	Service Vendor				☐		

First, we navigate to Accounts Payable, then go to Setup. After that, we click Add to create a new configuration.

Next, we configure the main fields:

- Account Code → select Group
- Account/Group Number → select the Vendor Group

Examples of vendor groups include:

- Local for local vendors
- Foreign for international vendors
- Service for service providers

We select the vendor group from the dropdown list that was previously created in Vendor Groups. This step helps the system identify which group each vendor belongs to.

Assign Ledger Accounts

After selecting the **Vendor Group**, we assign the **ledger accounts** that will be used in financial postings.

We fill in important fields such as:

Finance and Operations Accounts payable > Setup > Vendor posting profiles

Standard view

Vendor posting profiles

Posting profile: Description:

Setup

120202	Acc.Depreciation Furniture & Fixtures
120203	Acc.Depreciation Office Equipment
120204	Acc.Depreciation Motor Vehicles
210101	Accounts Payables
210201	Other Accounts Payables
210301	Short Term Loans (Murabaha)
210401	Accrued Salaries

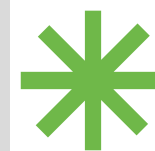

Show all

Activate Windows
Go to Settings to activate Windows

- **Summary Account** which is usually **Accounts Payables**
- **Liquidity Account for Payments**, which is the **bank or cash account**
- **Sales Tax Prepayments** if a tax account is required
- **Arrival**, which is optional
- **Offset Account** if an offset account is used

In the example shown, the **Summary Account** is linked to **Accounts Payables**.

After completing the configuration, we click **Save** to store the setup in the system.

Posting Profile & System Logic

In this step, we link the configuration to the **Accounts Payable Parameters**.

We navigate to:

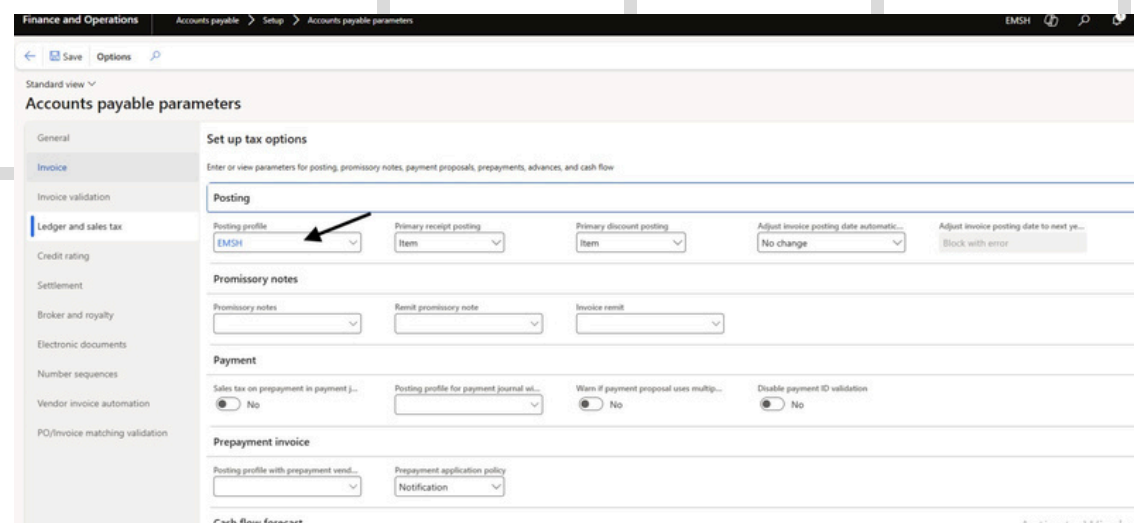

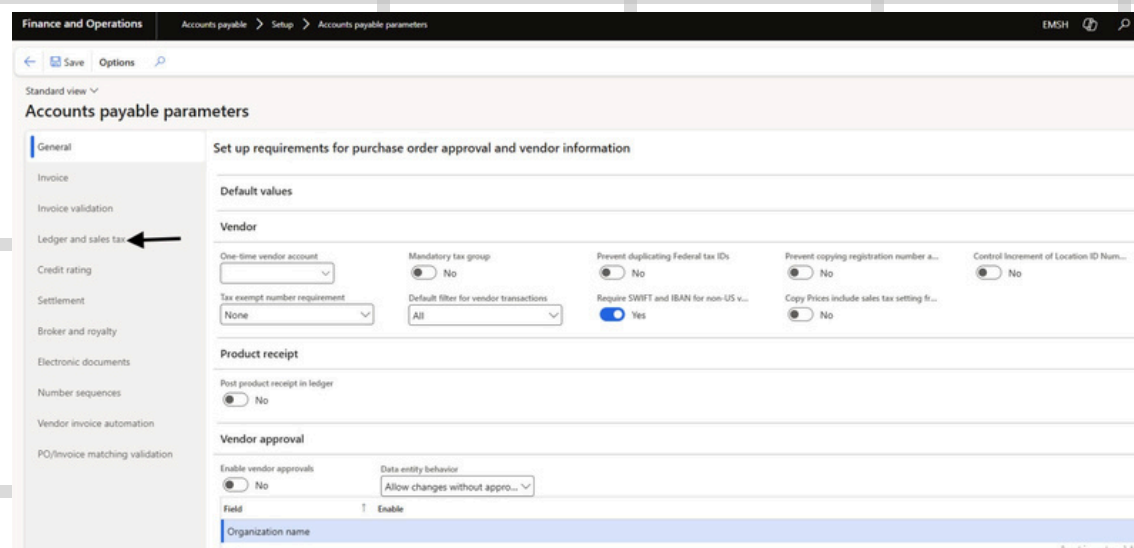

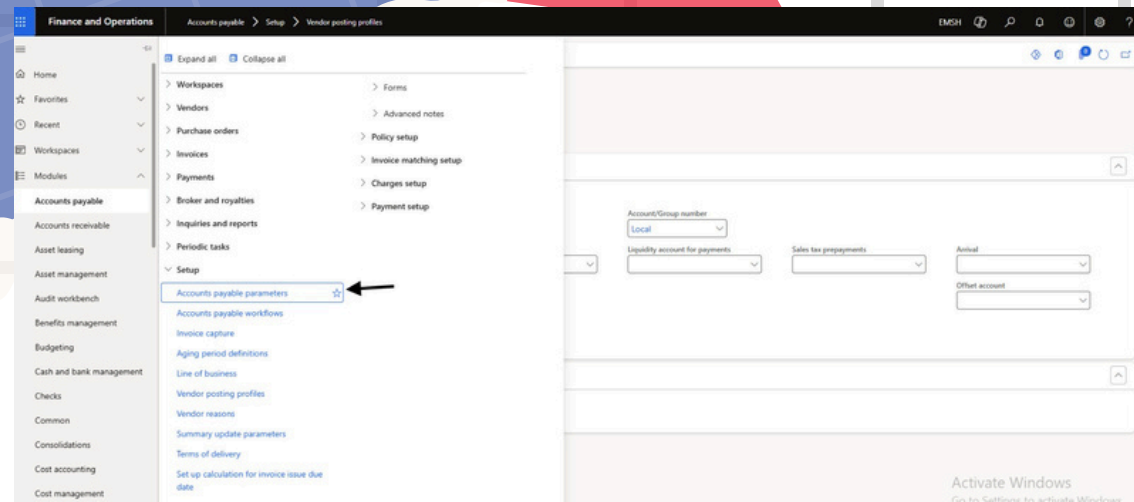

Accounts Payable → Setup → Accounts Payable Parameters

Then we open the **Ledger and Sales Tax** tab.

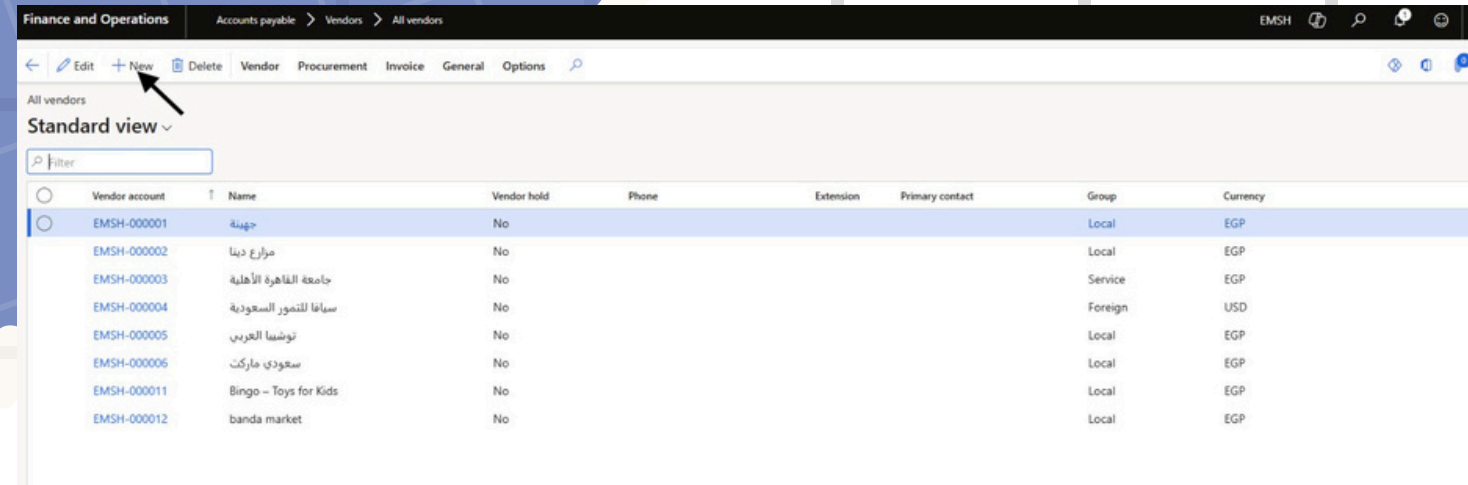

Here we set the **Posting Profile**, for example **EMSH**.

This ensures that the system uses this posting profile automatically when processing vendor transactions.

As a result, when a **vendor invoice or payment is posted**, the system automatically records the transaction in the **Accounts Payable ledger account** based on the vendor group mapping

Creating a New Vendor

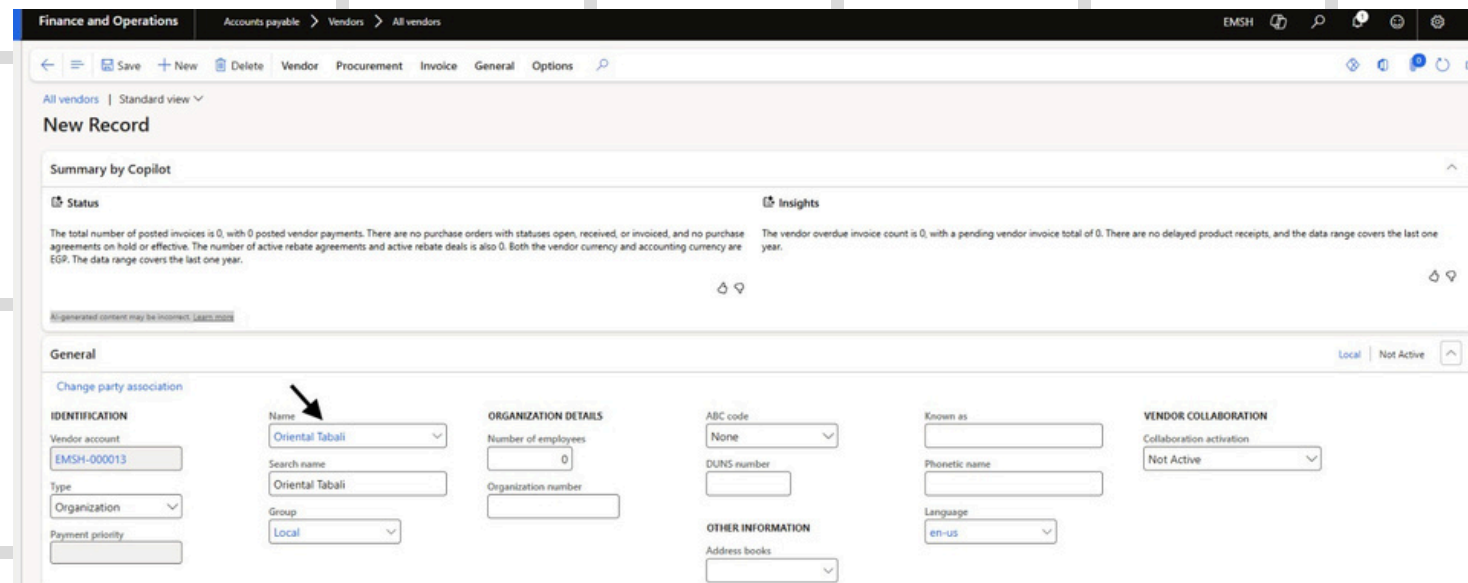

In this step, we create a new vendor in the system.

First, we navigate to **Accounts Payable**, then open **All Vendors** and click **New**.

A vendor form will appear where we enter the main information such as the **vendor name, type, vendor group, and currency**.

The **vendor account number** is generated automatically by the system.

It is very important to select the correct **vendor group**, because it must match the **vendor posting profile** that was configured earlier.

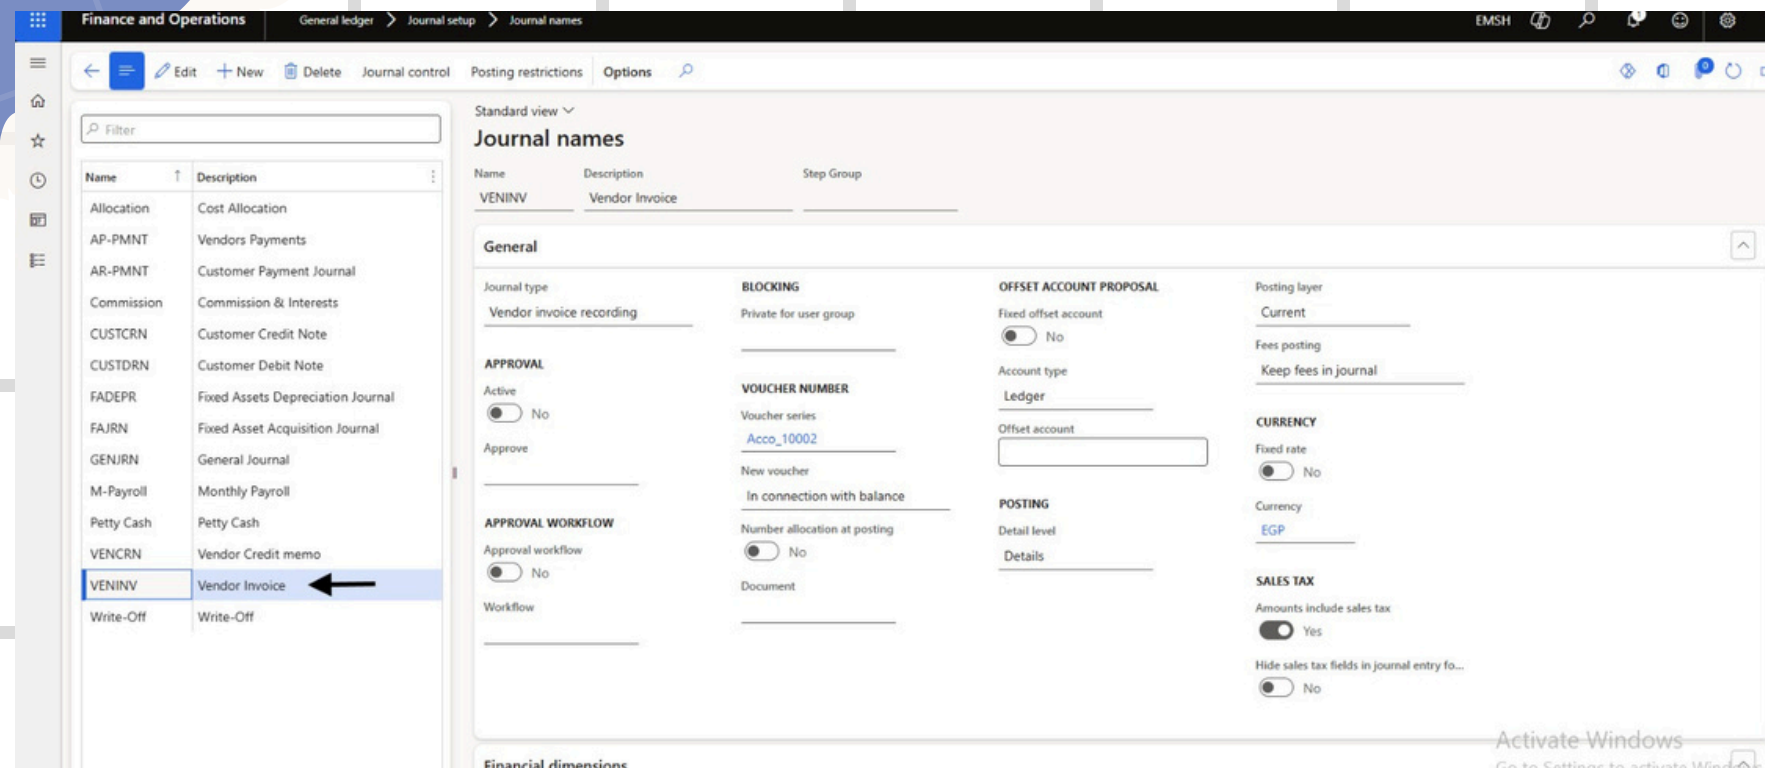

After filling all the required fields, we simply click **Save**, and the vendor is created successfully.

Creating Vendor Invoice Journal

After creating the vendor, the next step is to record the vendor invoice.

To do this, we go to **Accounts Payable**, then **Invoices**, and select **Invoice Journal**.

Inside the journal page, we click **New** to create a new journal batch.

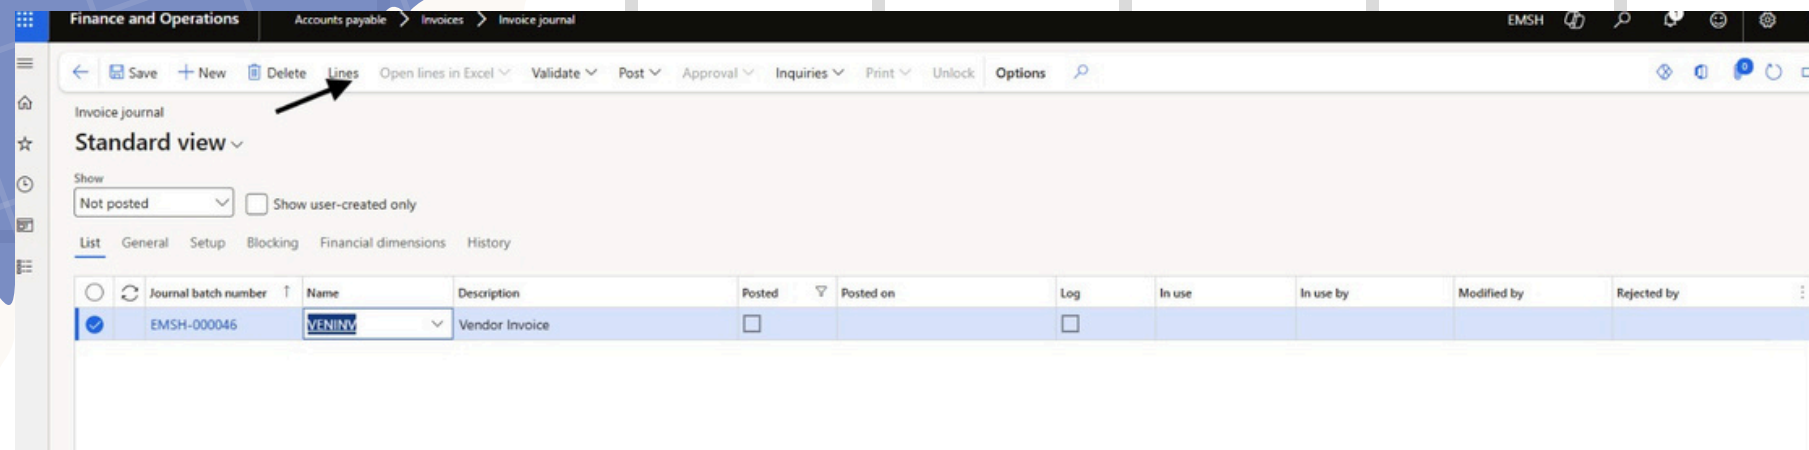

The system generates a **journal batch number automatically**, and we select the **journal name VENINV**, which is used for vendor invoices.

This journal name must already be configured in the system because it controls how the invoice will be recorded in the general ledger.

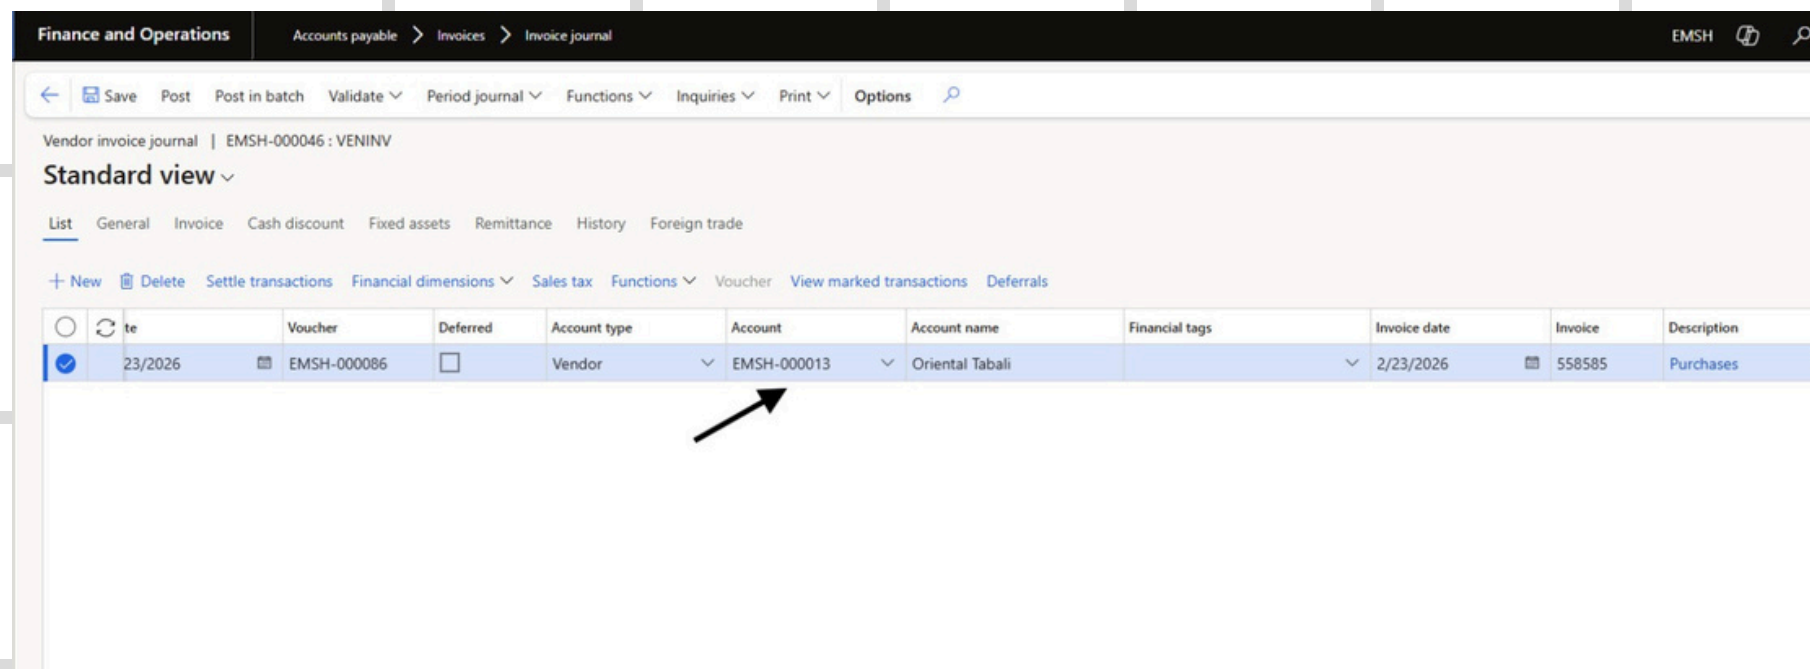

Recording and Posting the Invoice

Then we open **Lines** and enter the invoice details such as **vendor account**, **invoice date**, **invoice number**, and **description**.

After that, we click **Validate** to check the data and then **Post** to record the transaction. The system automatically creates the accounting entry: **Debit Purchase Expense** and **Credit Accounts Payable**.

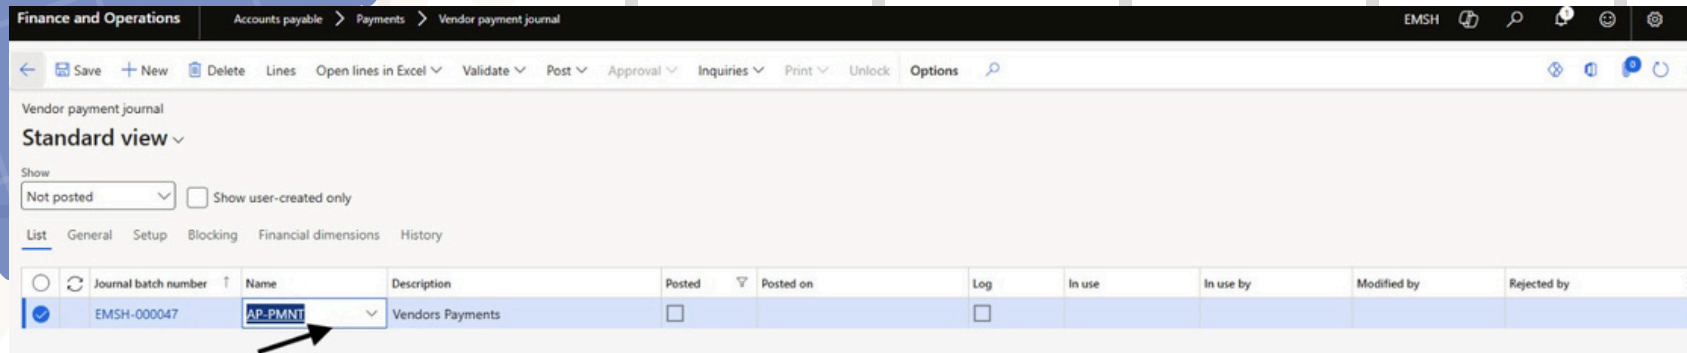

Journal batch number	Name	Description	Posted	Posted on	Log	In use	In use by	Modified by	Rejected by
EM5H-000046	VENINV	Vendor Invoice	☐		☐				

Date	Voucher	Deferred	Account type	Account	Account name	Financial tags	Invoice date	Invoice	Description
23/2026	EM5H-000086	☐	Vendor	EM5H-000013	Oriental Tabali		2/23/2026	558585	Purchases

Confirm Invoice & Open Payment Journal

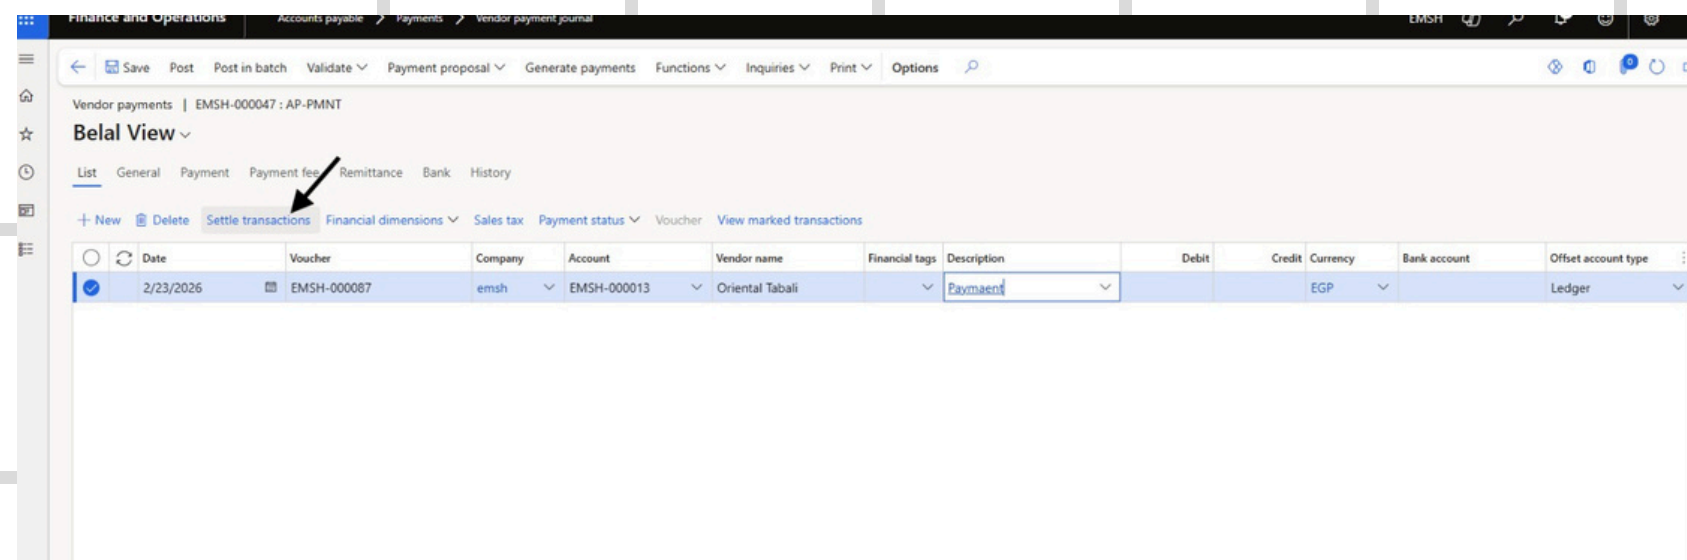

First, we confirm that the vendor invoice was posted successfully in the **Invoice Journal**.

After that, we go to **Accounts Payable → Payments** and open the **Vendor Payment Journal** to start the payment process.

Next, we create a new payment journal using **AP-PMNT**.

Then we enter the vendor account, date, and description.

After that, we click **Settle Transactions** and select the invoice that we want to pay

Post the Payment

Accounts payable > Payments > Vendor payment journal EMS

Match Validate ▾ Payment proposal ▾ Generate payments Functions ▾ Inquiries ▾ Print ▾ Options 🔍

47 : AP-PMNT

Payment fee Remittance Bank History

Transactions Financial dimensions ▾ Sales tax Payment status ▾ Voucher View marked transactions

Voucher	Company	Account	Vendor name	Financial tags	Description	Debit	Credit	Currency	Bank a
EMSH-000087	emsh ▾	EMSH-000013 ▾	Oriental Tabali	▾	Paymaent ▾	5,000.00		EGP ▾	

Finally, we select the **bank account as the offset account** and enter the payment amount.

Then we **validate and post the journal**.
The system automatically records the entry:
Debit Accounts Payable and Credit Bank,
which closes the vendor invoice.

Viewing Vendor Transactions

Vendor transactions | EMSH-000013: Oriental Tabali
