Introduction

why we should use AP module?

Accounts Payable (AP) :

is a critical financial function that ensures organizations effectively manage their obligations to suppliers and vendors. Within Microsoft Dynamics 365, the Accounts Payable module provides a comprehensive system for recording vendor transactions, managing invoices, controlling payments, and maintaining accurate financial records.

SO THIS MODULE....

- helps organizations streamline the procure-to-pay process by automating invoice processing,
- improving visibility of outstanding liabilities, and ensuring timely payments.
- By integrating seamlessly with purchasing, inventory, and general ledger modules, Microsoft Dynamics 365 enables businesses to maintain financial accuracy, strengthen vendor relationships, and support better cash flow management.

first step:

Vendor Group Mapping

We will discuss how we map Vendor Groups in Microsoft Dynamics 365.

Vendor group mapping helps the system know which accounting setup should be used for each type of vendor."

1

"First, we go to Accounts Payable, then open Setup, and select Vendor Posting Profiles. From here we can configure how vendors will be linked to accounting accounts."

vendor group examples

"Vendor groups are categories that organize vendors."

For example:

- Local for local vendors
- Foreign for international vendors
- Service for service providers"

"By selecting the correct vendor group, the system can automatically apply the correct financial posting rules for each vendor. This helps keep accounting transactions organized and accurate."

After selecting the Vendor Group, we assign the ledger accounts that will be used in financial postings.

We fill in important fields such as: Assign Ledger Accounts

Summary Account which is usually Accounts Payables

Creating a New Vendor

2

In this step, we create a new vendor in the system using Microsoft Dynamics 365. First, we navigate to Accounts Payable, then open All Vendors and click New to start creating a vendor record.

A vendor form will appear where we enter the main information, such as the vendor name, vendor type, vendor group, and currency. The vendor account number is automatically generated by the system.

It is important to select the correct vendor group because it must match the vendor posting profile that was configured earlier in the system.

After filling in all the required information, we click Save, and the new vendor is created successfully in the system.

As we see:

Creating Vendor Invoice Journal

3

After creating the vendor, the next step is to record the vendor invoice in Microsoft Dynamics 365. We navigate to Accounts Payable, then select Invoices and open Invoice Journal. Next, we click New to create a journal batch. The system automatically generates the journal batch number, and we select the VENINV journal name used for vendor invoices.

✦✦✦ This journal controls how the invoice will be recorded in the general ledger. After that, we can enter the invoice details and prepare it for posting.

Recording and Posting the Invoice :

4

Next, we open Lines and enter the invoice details such as the vendor account, invoice date, invoice number, and description. After entering the information, we click Validate to check the data, then Post to record the transaction in the system.

Once posted, the system automatically creates the accounting entry: Debit Purchase Expense and Credit Accounts Payable.

As we see :

Creating Vendor Payment Journal

5

To record a vendor payment in Microsoft Dynamics 365, we go to Accounts Payable, then Payments, and open Vendor Payment Journal.

Next, we click New to create a payment journal. The system generates the journal batch number automatically.

Then we enter the payment details such as the vendor account, amount, and description. Finally, we click Validate and Post to record the payment.

Verify Vendor Transactions

6

To review a vendor's transactions in Microsoft Dynamics 365, we go to Accounts Payable and open All Vendors. Then we select the required vendor from the list.

Next, we click Transactions to display all financial activities related to that vendor, such as invoices and payments.

This page allows us to track the invoice amounts, payments made, and the remaining balance, helping us monitor the vendor's account status.

The Vendor Aging Report in Microsoft Dynamics 365 is used to review the outstanding balances owed to vendors. It categorizes vendor balances based on different time periods to show how long invoices have been unpaid.

This report helps the finance team monitor due and overdue payments, analyze vendor liabilities, and manage cash flow more effectively. It also provides a clear view of each vendor's balance and the total amount owed by the company.

Vendor Balance List

The Vendor Balance List in Microsoft Dynamics 365 provides a summary of each vendor's financial balance. It shows the opening balance, debit transactions, credit transactions, and the closing balance for every vendor.

This report helps the finance team review the total amounts owed to vendors and track all transactions during a specific period. It also provides a clear overview of the company's total vendor liabilities.
